### **DETAILED ACTION**

1. Preliminary amendment to the claims filed on 05/27/05 is acknowledged.

#### ***Election/Restrictions***

2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

reactive elements comprise iron (Claim 7);

reactive elements comprise zinc (Claims 8 and 10) ;

reactive elements comprise magnesium (Claim 9).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: Claim 6.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the common technical feature is a system comprising an optical fiber arranged to receive light from an optical source and reaction elements or catalysts adapted to react with constituents of the environment to create a gas. Such system is known in the art, see e.g. Weber et al. (US 5,490,490) disclosing on-board gas composition

sensor for internal combustion engine exhaust gases comprising fiber-optic sensor (18 and 16) and catalytic converter, which interacts with the environment and produces gases to be detected.

4. A telephone call was made to Randol W. Read on 08/28/08 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

5. Examiner's Note: the examiner respectfully requests the Applicant to provide some background information for the claimed invention, in particular for supporting the chemistry laying in the basis of claims 5-10. For example, to the examiner's knowledge Zn reacts with  $2\text{H}^+$  to yield  $\text{H}_2$ ; however,  $\text{H}_2\text{S}$  in aqueous medium does not dissociate to  $\text{H}^+$  and  $\text{HS}^-$  at a measurable rate; it does not appear that Zn will be able to react with  $\text{H}^+$  in the solution of  $\text{H}_2\text{S}$  because of too low concentration of  $\text{H}^+$  in the solution.

Furthermore, iron's corrosion occurs over a long period of time. It is not apparent, as to how the system can become operable within a reasonable time frame.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yelena G. Gakh, Ph.D. whose telephone number is (571) 272-1257. The examiner can normally be reached on 9:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
